Education

Chennai Institute of Technology

B.Tech in Artificial Intelligence and Data Science — CGPA: 8.91/10

Chennai, India

Sep. 2024 – Mar. 2028

Experience

OneGlance Software Services | AI Engineer Intern

2025

- Designed and implemented a prototype **ML inference pipeline** for extracting structured data from 3-minute audio inputs, achieving **<10s** end-to-end latency.
- Prototyped a **speech-to-text** field extraction system using Faster-Whisper and fine-tuned **Qwen 3B (LoRA/PEFT)** on **100+ synthetic datasets**.
- Conducted accuracy, latency, and performance benchmarking to evaluate trade-offs and inform potential production-scale deployment.

Projects

CosmosScript | Java 17, TypeScript, React.js | Custom Programming Language & Online IDE | [Source Code](#)

2025

- Designed a dynamically typed language in Java 17 with a **4-stage interpreter** (lexer, parser, AST, evaluator), **20+ grammar rules**, and **12+ AST node types**.
- Built an online IDE with syntax highlighting and live execution; validated correctness via **70+ test programs** using TypeScript and React.js.
- Implemented **lexical scoping**, first-class functions, and recursion support, enabling the language to handle real-world programming constructs end-to-end.

Delphi-5 | LangGraph, Groq LLMs, SQLAlchemy | Multi-Agent Debate Orchestrator | [Source Code](#)

2025

- Designed a **5-agent AI system** (Finance, Risk, Ethics, Devil's Advocate, Moderator) orchestrated via LangGraph for **2-round** structured debate workflows.
- Implemented reusable agent abstractions and **SQLAlchemy-backed persistence** for debate state tracking and end-to-end traceability.
- Enabled structured multi-perspective reasoning by routing agent outputs through a **graph-based execution engine**, producing auditable decision summaries.

Autonomous SOC Analyst | Python, FastAPI, LangGraph, Groq LLM, React.js, Elasticsearch | [Source Code](#)

2026

- Built a **4-agent LangGraph** SOC pipeline (Log Analysis → Threat Classification → Decision → Response) achieving **sub-30s** detection latency.
- Integrated **Groq Llama 3.3 70B** with Isolation Forest (**9 engineered features**) for anomaly detection across **8 attack types** and **4 severity levels**.
- Implemented multi-tenant RBAC, real-time React dashboard via WebSocket, and a **feedback-driven learning system** for continuous analyst improvement.

AgentHR | Python, Flask, Groq LLM, SQLAlchemy, Whisper | [Source Code](#)

2026

- Built a **ReAct-based agentic loop** with **6 LLM tool-calling functions** (apply, approve, balance check, etc.) enabling autonomous HR query resolution via natural language.
- Implemented **RBAC** with employee/admin role separation, smart leave logic excluding weekends and holidays, and **SQLAlchemy-backed** SQLite persistence.
- Integrated **Whisper-v3** for real-time multilingual voice input and a **ChromaDB RAG engine** for hallucination-free policy lookups.

Technical Skills

- | | | |
|---------------|--------------|--------------|
| • Python | • Java | • C++ |
| • TypeScript | • SQL | • JavaScript |
| • Flask | • Node.js | • React.js |
| • LoRA (PEFT) | • Agentic AI | • Git/GitHub |

Certifications

- **Google** – Cybersecurity Professional Certificate (*In Progress*)
- **NPTEL** – Introduction to Internet of Things

Competitive Programming

- LeetCode: **Knight** badge holder with a rating of **1964**. Solved **672** problems (652 in Java). | [Profile](#)
- CodeForces: Rating **1222 (Pupil)** | [Profile](#) CodeChef: Rating **1604 (3 Star)** | [Profile](#)

Achievements

- Second Runner up in **Khacks 3.0** – out of 1280 teams (**Top 0.2%**)
- Finalist in **Code-a-thon 2025** (Top 1.5%, 40 out of 2700 participants) – College Competitive Programming Contest
